video in brazil with english subtitles live online video from youtube watch or download in 1080p hd quality and full length video of the show from the youtube channel and other youtube in best audio and video quality available online on the internet free from viruses you can also watch your favorite music videos online online live streaming videos on this website from all around the world all your favorite music videos are now playing here live and free on wix.com all your favorite music videos are now playing here live and free on wix.com we are here to help you with your music problem mp3, music, ringtones, wallpapers from android, ios, computer, tablet phone and more phone from all over the world, you can also create ringtones from your mobile phone and save it to your smartphone or mobile phone you can download any of your favorite music tracks ringtones or music videos to your computer and phone. Neuronal nicotinic receptors are inhibited by polyunsaturated fatty acids. Neuronal nicotinic receptors play a critical role in regulating neuronal activity. The brain membrane is rich in polyunsaturated fatty acids and fatty acid binding proteins. The present study evaluated the effects of fatty acids on neuronal nicotinic receptors. P(1) and P(2) receptors were pre-exposed to docosahexaenoic (22:6n-3) and arachidonic acid (20:4n-6) (1 microM) for 30 min, rinsed, then exposed to 2 nM (3H)-epibatidine (100 nM) for 2 min. The results showed a time-dependent inhibition of P(2) receptors by arachidonic acid. The inhibition of both receptors was rapid and reversed by washing. The EC(50) of arachidonic acid for P(2) receptors was 10.4 +/- 0.5 microM, and the maximum effect was 56.8 +/- 4.1% of control. The effects of both arachidonic and docosahexaenoic acid on P(2) receptors were dose-dependent and reversible. Pre-exposure to docosahexaenoic acid for 10 min also inhibited P(2) receptors. The current findings demonstrate a novel way in which polyunsaturated fatty acids, especially docosahexaenoic acid, may modulate neuronal nicotinic receptors in the brain.Q: Getting text from selected anchor element with jQuery How do 82157476af
